

What's New in the Threat Analysis Reporter '1.3.00' Version

This Threat Analysis Reporter software release upgrades version 1.2.00 or higher to 1.3.00.

WARNING:

The 1.2.00 software update must be applied before applying this update. The 1.3.00 upgrade will take about 30 minutes to install, and during the upgrade process the system will automatically reboot twice. Also, during the upgrade process, the user interface will not be available. Additionally, since this software release includes a kernel upgrade for the operating system, once applied, this update cannot be uninstalled.

New Features, Enhancements, and Fixes

This software release includes several new performance and security enhancements. The release includes the following operating system, database and Web server upgrades:

CentOS – new operating system, upgraded from Linux OS

MySQL – new Enterprise version, upgraded from Community version

Apache Web Server – upgraded server version

Tomcat – upgraded kernel version

Java – upgraded JDK version
