

What's New in the R3000 '1.10.01' Version

This hot fix release of software for the R3000 Enterprise Filter requires an R3000 unit running software version 1.10.00.

IMPORTANT NOTICE: 8e6 recommends applying the 1.10.01 patch at a time when a brief outage in filtering would be acceptable, as an approximate 5-minute outage in R3000 filtering services will occur when executing this upgrade.

Fixes

- Fix the Override Account bug in which an end user with an override account tries to use his/her profile and receives a message that the override account is already active, when it is not
- Correction in the Tier 3 authentication dialog box, so that the second option to reads as follows: "Administrator manually distributes JRE to user workstations"
- File permission change to support proper logging operation
- In a synchronization environment, the target server now shows its own host name instead of the host name of the source server
- Fix for R3000IR unit so that the Web client can be restarted through the Administrator console
