

What's New in the ER Access Client '3.9.20' Version

This newest release of the Enterprise Reporter MS Access Client (3.9.20) requires Server software version 3.12.13 or later (preferably 3.80.00). This release contains the following changes since the previous version of the Client (3.9.7):

Fixes, New Features, and Enhancements

- The Client was enhanced so that the initial report screen loads faster at startup.
- The escape character “\” can now be used.
- The MS Access client is now compatible with MySQL 4.1 and higher.
- A Date Scope field was added in the main menu so the user can specify a date range prior to generating a report.
- The Last Weekend date scope has been added.
- The new Help button in the main menu gives you access to the Access Client user guide.
- Miscellaneous fixes were made to reports and charts, and to the login feature.
